CSI 4133

Lab 3

September 30, 2022

Logan Rose

300059034

Methodology

A slightly modified verion of the *getDiff* function from the previous lab. A loop was used to iterate through the frames of the video. On each frame, the current frame and the previous frame are passed to the *getDiff* function, the result is then processed and written to the out.avi video.

Results

Figure 1 includes screenshots from the output video. The output video is included in the submission as *out.avi*.
